SKILLS

Java	Object-Oriented Design, Classes, Functions, Data Structures, Algorithms, GUI
Languages	Java, C++, Python, Javascript/Typescript, HTML, CSS, Processing
Tools	Git, Github, VS-Code, Netbeans IDE, UNIX Command-Line
Other	Technical Documentation, Agile/Scrum Methodologies, Solution Architecture
Soft	Collaboration, Communication, Leadership, Time Management, Organization, Fast Learner

EXPERIENCE

Software Engineer - Friendlier — Jan 2022 - Apr 2022

- Developed an automated payment and invoicing system using the Stripe API saving the company 32 hours per month
- Constructed firebase functions to track analytics within the application to seek areas of improvement and plan features
- Integrated Slack API to create a webhook directing help forms, removing the 1-hour delay between user and developer

Software Developer Intern - Xerris — Jul 2021 - Aug 2021

- Built front-end React components using Typescript, HTML, and CSS for a web application being used at 20+ international mineral extraction sites by roughly 10 000 daily users to track injection and extraction wells on site
- Created responsive components that are adaptable depending on screen size, using industry-standard coding practice
- Contributed to an Agile development team by creating JEST tests, reviewing production level peer code and pair programming to solve bugs, which resulted in an average of 33% less time spent triaging and resolving a bug per sprint

Software and Design Team Member - Robotics Team (FIRST Team 4733) — Sep 2018 - Mar 2020

- Conceptualized the mechanical aspects of the block-carrying robot, problem-solving through 3 design requirements
- Monitored 300 lines of Java code for bugs on the software team, working directly with other members to resolve bugs
- Collaborated directly with team leads, actively learning by asking questions and observing the work done by all 5 teams

PROJECTS & COMPETITIONS

Physics Problem Solver - School Project — Jan 2021

- Java-based application working with a classmate to create a physics equation calculator, a physics exam simulator with a question bank, and a grade management system within a span of 2 weeks for my grade 12 computer science AP class
- Took into account and implemented all 8 units learned throughout the year and all possible equations while taking into account variable possibilities and metrics from an official workbook used for the semester for our physics AP course
- Implemented additional programming features such as file saving and switch statements not discussed throughout the

Inventory Management System - Calgary Youth Hackathon — Jun 2021

- Coded a Java-based inventory management system for businesses, working with a team of 7 to create the presentation
- Created with various features, like ordering, inventory tracking, and receipts which saves businesses up to $260/month using this open-source system as opposed to existing paid inventory management systems offered by competitors

MIT COVID-19 Challenge - MIT Ideathon — Nov 2020

- Oversaw the project by managing the creation of the idea and final presentation within a 36-hour window as team lead
- Presented all technical aspects of the project in a 5-minute presentation and answered any clarifying questions by judges
- Won 1st place for Systems involving Artificial Intelligence, out of a total of 20 other teams competing in the same track

EDUCATION

Candidate for B.A.S.c in Computer Engineering - University of Waterloo — Sep 2021- Present
