SKILLS

Web Development React.js, Vue.js, Node.js, Bootstrap, DOM, jQuery, Firebase, SQL, MongoDB, WordPress

Languages Javascript/Typescript, HTML, CSS, Java, Python, C++, Processing

Tools VS-Code, UNIX Command Line, Git, NPM, Jest, AWS, Jupyter Notebook, Github, NVM, Netbeans

Other Agile/Scrum, Solution Architecture, Machine Learning Pipeline Documentation, Arduino

Soft Quick Learner, Collaboration, Communication, Leadership, Time Management, Organization

EXPERIENCE

Software Engineer - Friendlier Jan 2022 - Apr 2022

- Arranged and implemented new features on the client portal built using Vue.js, such as forms hooking onto slack for direct communication between users and developers, and an online payment system, saving the company 32 hours per month
- Organized the backend systems with over 10000 documents contained within various user collections on firebase

Software Developer Intern - Xerris Jul 2021 - Aug 2021

- Built front-end React components using Typescript, HTML, and CSS for a web application being used at 20+ international mineral extraction sites by roughly 10 000 daily users to track injection and extraction wells on sites
- Contributed to an Agile development team by creating JEST tests, reviewing production level peer code and pair programming to solve bugs, which resulted in an average of 33% less time spent triaging and resolving a bug per sprint
- Created a 15-step Machine Learning Documentation for AWS Sagemaker Pipeline for future developers onboarding

Web Developer Volunteer - Technology Alberta Apr 2021 - Aug 2021

- Developed interactive components for company website attracting roughly 3 500 monthly visitors, using WordPress
- Constructed a hot-spot image with 46 zones, each of which links to the company website depending on the zone clicked
- Integrated a plugin to create an events management system organizing over 60 events by date, time, and location

COMPETITIONS & PROJECTS

Basketball Shot Counter - Personal Project May 2021

- Created a basketball shot counting system that can be used on a mobile or web device to count your makes and misses on a basketball hoop using HTML and CSS to handle the basic design, and Javascript to handle functionality and logic.
- Implemented multiple user clickable buttons to keep track of shots to change the colour scheme of the application
- Used an alert system to prompt the user to refresh the page to reset counts, this is triggered through a button click

Dice Game - Personal Project May 2021

- Coded a simple dice web game with two players and on page load, a javascript algorithm picks two random numbers from 1-6 for each player, these are then displayed on-screen through the associated dice image related to each number
- Instituted a check to see which player won based on the dice roll with possible states being a player winning or a draw
- Implemented HTML and CSS to design the application to appear appealing to users based on various design principles

MIT COVID-19 Challenge - MIT Ideathon Nov 2020

- Oversaw the project by managing the creation of the idea and final presentation within a 36-hour window as team lead
- Presented all technical aspects of the project in a 5-minute presentation and answered any clarifying questions by judges
- Won 1st place for Systems involving Artificial Intelligence, out of a total of 20 other teams competing in the same track

EDUCATION

Candidate for B.A.S.c in Computer Engineering - University of Waterloo Sep 2021- Present
